

Puppy Weight Chart by Age

Puppies grow fast, then slow down as they near adult size, and bigger breeds keep growing for longer. The chart shows the share of adult weight a puppy has usually reached at each age; the log below keeps your puppy's own numbers. **To estimate adult weight: current weight ÷ the percentage for your puppy's age and size.**

PUPPY'S NAME

BREED / SIZE

BIRTH DATE

SHARE OF ADULT WEIGHT, BY AGE

AGE	TOY	SMALL	MEDIUM	LARGE	GIANT
2 months	28%	25%	22%	19%	16%
3 months	45%	40%	35%	28%	24%
4 months	58%	53%	47%	38%	33%
6 months	78%	70%	63%	52%	45%
9 months	94%	88%	80%	70%	62%
12 months	100%	98%	92%	83%	75%
Full-grown by	~12 mo	~14 mo	~16 mo	~20 mo	~24 mo

Toy: under ~12 lb / 5.5 kg as an adult (Chihuahua, Yorkie) · Small: ~12–25 lb / 5.5–11 kg (Beagle, Frenchie) · Medium: ~25–50 lb / 11–23 kg (Border Collie, Aussie) · Large: ~50–100 lb / 23–45 kg (Lab, GSD, Golden) · Giant: over ~100 lb / 45 kg (Great Dane, Mastiff).

Worked example: a 4-month-old **medium** puppy weighing 20 lb → $20 \div 0.47 \approx 43$ lb as an adult. Purebred estimates usually land within about 10–20%; mixed breeds vary more, and anything before 8–12 weeks is a loose guess.

GROWTH LOG

DATE	AGE	WEIGHT	ESTIMATED ADULT	NOTES

Ask your vet if your puppy suddenly stops gaining, loses weight, or looks too thin or too round for its age. Weigh on the same scale, at the same time of day, every 2–4 weeks.
